

For Immediate Release

Onefive releases entirely new ultrafast laser platform: KATANA

Zurich, Switzerland, April 1st, 2010 - Onefive's new KATANA Picosecond fiber laser system is a compact and versatile tool for applications like micro machining, microscopy, lightning, super continuum generation and many more. At pulse energies of up to 10 μJ , it offers continuous pulse repetition rate tuning, pulse on demand, and high pulse and spectral quality, making it a unique source.

The laser system comes in Onefives classical compact air cooled package, offers true one-button operation and is available in the 256-1550nm range.
